

## CREATE YOUR OWN GUIHAN!

**Materials needed:**  
1 Hågon (Coconut leaf)

**Binga'** = A bunch of coconut leaves

**Hågon** = Single coconut leaf

**Nuhot/Nihot** = Coconut leaf vein

1

Peel the hågon sides off of the nuhot.

For an easier peel, start from the bottom of the binga' and work your way up.

Hågon side

Nuhot

(Hågon A)

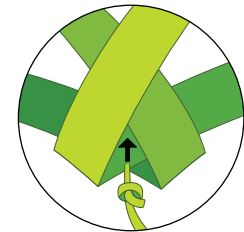

(Hågon B)

2

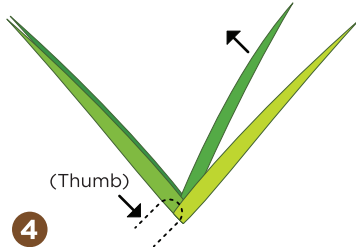

Fold each hågon side in half and place the nuhot on the side.

3

Weave hågon B into hågon A as shown. Make sure hågon B is the layer on top and that it is pointing to the right.

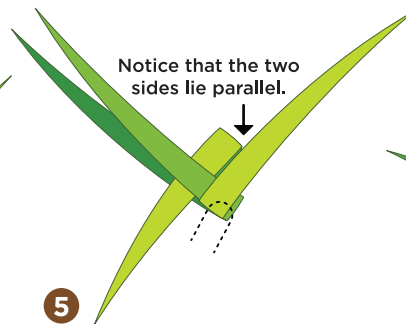

If you wish to put in a knotted nuhot, place the knot in the space indicated by the arrow above before tightening the weave. (For instructions, see below).

(Thumb)

4

While holding the base of the guihan with your left hand, grab the back of hågon B with your right hand and gently slide it to the left without moving the binga'.

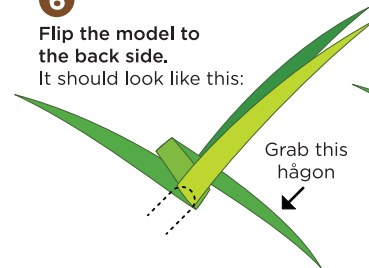

Notice that the two sides lie parallel.

5

Fold hågon B over so that its edge lies parallel to the top of hågon A. The hågon should also go **between** the two layers of hågon A.

6

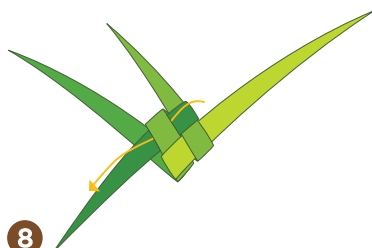

Flip the model to the back side. It should look like this:

Grab this hågon

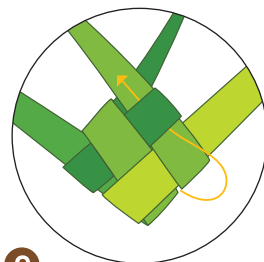

7

Now, while holding the binga' in place, gently slide the back layer of hågon A to the left; similar to step 4.

8

With the hågon you just grabbed, weave it down through the layers as shown. When finished, flip the guihan back over.

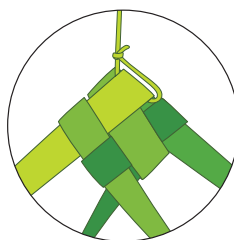

9

Grab the same hågon again and weave it through the guihan one more time.

**To make the fishing pole to hang the guihan:**

Make knot up here

Tie a knot at the tip of the nuhot and insert into model as shown after step 3.

Or wrap the nuhot around the guihan and tie.
