

## CREATE YOUR OWN GUIHAN!

**Materials needed:**  
1 Hāgon (Coconut leaf)

Binga' = A bunch of coconut leaves

Hāgon = Single coconut leaf

Nuhot/Nihot = Coconut leaf vein

**1**

Peel the hāgon sides off of the nuhot.

For an easier peel, start from the bottom of the binga' and work your way up.

(Hāgon A)

(Hāgon B)

**2**

Fold each hāgon side in half and place the nuhot on the side.

**3**

Weave hāgon B into hāgon A as shown. Make sure hāgon B is the layer on top and that it is pointing to the right.

If you wish to put in a knotted nuhot, place the knot in the space indicated by the arrow above before tightening the weave. (For instructions, see below).

**4**

While holding the base of the guihan with your left hand, grab the back of hāgon B with your right hand and gently slide it to the left without moving the binga'.

**5**

Fold hāgon B over so that its edge lies parallel to the top of hāgon A. The hāgon should also go **between** the two layers of hāgon A.

**6**

Flip the model to the back side. It should look like this:

**7**

Now, while holding the binga' in place, gently slide the back layer of hāgon A to the left; similar to step 4.

**8**

With the hāgon you just grabbed, weave it down through the layers as shown. When finished, flip the guihan back over.

**9**

Grab the same hāgon again and weave it through the guihan one more time.

**To make the fishing pole to hang the guihan:**

Make knot up here

Tie a knot at the tip of the nuhot and insert into model as shown after step 3.

Or wrap the nuhot around the guihan and tie.
